XTraN Passenger

XTraN Passenger is the most highly developed passenger transport fleet management system on the market, in that it improves resource development, ensures timetable regularity, provides information to passengers, increases on-board security, and ensures a reduction in operational costs.

Activity Optimisation

XTraN Passenger allows optimised line management, providing automatic analysis of diversions, and taking all measures to assure maximum quality at minimum cost, for instance allocating more vehicles to cope with increased predicted demand, or choosing alternative routes.

XTraN Passenger cuts down costs for personnel on street duty and in the control centre, and also reduces the operators' learning cycle.

It can locate vehicles, register fuel consumption and maintenance needs, manage the exchange of orders and messages and ensure alarm reception.

The most effective solution to optimize passenger transport activity management

Integration with company systems

XTraN Passenger can be automatically integrated with other company information systems, e.g. tickets, personnel management systems or services/timetables planning systems.

Regular services

In addition to providing a complete view of the status of all lines, routes and active vehicles, the XTraN Passenger automatically regulates drivers' performance. Because XTraN Passenger is an extremely mature system, it can perform different kinds of regulation, ensuring the best passenger service at minimum cost.

Real-time Information to Customers

Panels at each stop allow XTraN Passenger to tell users in "real time" about the estimated arrival time for the next vehicle, increasing quality of service. In this context, information panels are installed inside vehicles, regarding the next stop and other relevant information. XTraN Passenger audio modules give the visually impaired access to the same information.

Improved security

The installed security systems allow XTraN Passenger to increase driver and passenger security. Extensions for communication with public order forces can be installed for quick intervention if an attack or public order disturbance occurs.

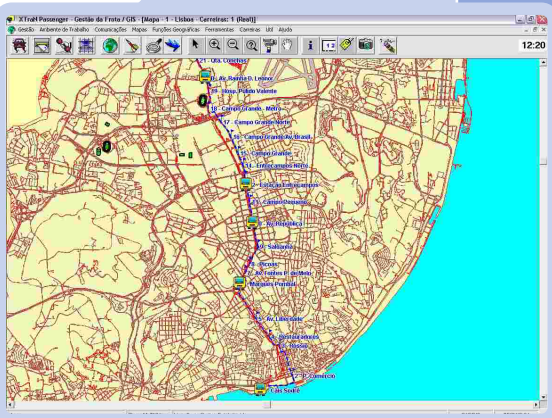

Ordered Traffic

XTraN Passenger greatly helps traffic through interfacing with traffic lights systems, ensuring the best possible flow management on main streets.

Benefits

With XTraN Passenger, all necessary conditions are created for the increase of service quality and driver and passenger security levels, bringing more customers to your lines. It also allows your company to be more competitive because it offers fundamental tools to effectively manage all human and material resources involved.
